

AUTOMATIC PALLET DISPENSER

Up to
60
Pallet/hour

An automatic pallet dispenser is a machine designed to store and automatically release pallets one by one into a production or packaging line. It helps reduce manual handling, saving time and improving workplace safety.

- ✓ High reliability
- ✓ Durable construction
- ✓ System integration
- ✓ Customizable
- ✓ Low maintenance

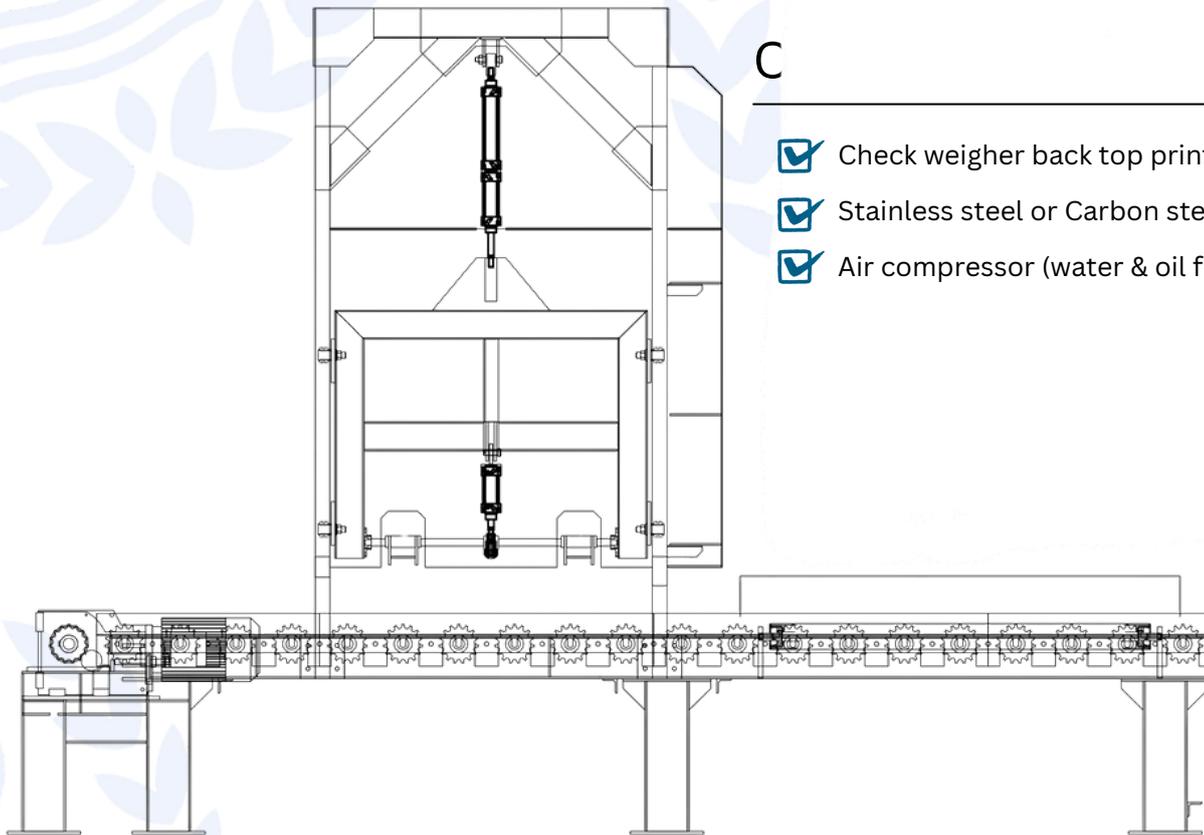

Description

The Automatic Pallet Dispenser is a high-efficiency system designed to automatically store, separate, and dispense pallets one by one into a production line. It eliminates manual handling, reduces downtime, and ensures a continuous supply of pallets for palletizing or packaging operations.

Key features

- Integration Ready Easily connects with robotic palletizers, conveyors, or bagging/packaging lines.
- Consistent Operation Prevents misalignment or double-feeding with advanced sensor detection.
- High Efficiency Reduces downtime and increases production throughput with continuous pallet supply.
